

Dear Ladies and Gentlemen

Hidden installations of covered safety sensors are not always the right choice, for instance in well frequented buildings with doors that are constantly in use, heavy safety doors or roller shutters, or for windows, doors and gates that require a high level of security.

These systems should be as robust as possible, but also as visible as possible to act as a deterrent. With that in mind, we added a surface mount magnetic contact with a robust block design to its range of magnetic contacts for monitoring openings on windows, doors and gates. Read more about this topic in our Newsletter.

An overview of the highlights:

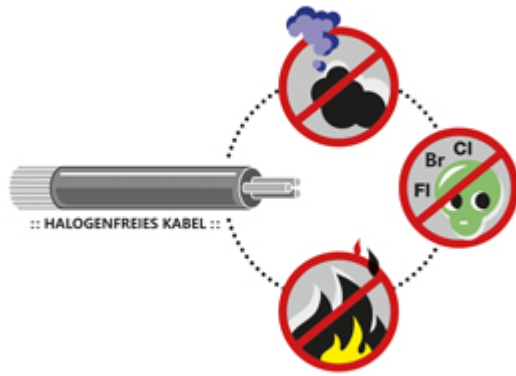

Visibly Robust Opening Monitoring

LINK offers a number of different variants of block-type surface mount magnetic contacts based on customer requirements with suitable mounting accessory and on request with country-specific certificates for use in european countries...

Simply Safer: Halogen-free Cables

Halogens include fluorine, chlorine and bromine. Some of these elements can be found in common cable insulation materials – for instance, chlorine can be found in PVC cables. In the event of fire, they pose a threat

to life because they may produce heavy smoke and highly poisonous gases when exposed to heat...

Last but not least...

Especially in difficult times it is important to stick together. That is why we would like to take this opportunity to say THANK YOU for your faith and loyalty that you have shown our team over the past few months and continue to show. We do everything in our power to maintain our services for you as much as possible.

We will keep you up to date in the future too - you can look forward to great products and interesting content.

We wish you all the best for the future - stay healthy.
