

Dear LINK Customer,

These days, modern doors are equipped with an increasing number of electronic components. These include motorised locks, fingerprint sensors, cameras, illuminated handles and much more. To operate, control and monitor these (security) components and more, electronic signals and energy need to be transmitted from the door frame to the door leaf. With the new **M 13 65** and/or **M 13 75** door loop, LINK has the perfect solution for this.

Equipped with a **12-wire cable**, the **M 13 65 / M 13 75** – the big brother of the popular miniature M 13 35 door loop with a 6-wire cable – increases the number of connection options.

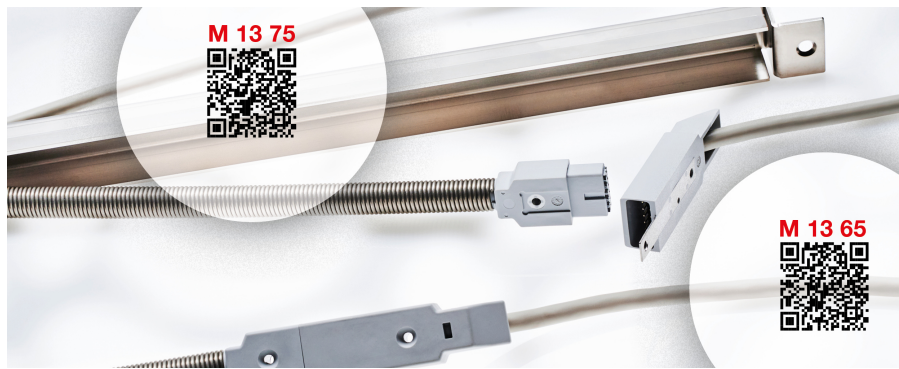

Yet the door loop has more to offer: it can be disconnected with ease via its plug and socket. This facilitates processes in the production of doors as well as the on-site assembly and maintenance. The plug and socket are protected against dust and splash/spray water (IP 54) and made from high-quality plastic. This gives the product a long life cycle.

The cable is halogen free, meets the relevant fire safety requirements and can be disposed of in an environmentally-friendly manner. In addition, the carrier box, cover plates (both available as accessories) and conducting spring are made from stainless steel. This prevents corrosion.

The **M 13 75** is supplied with a pre-assembled carrier box which facilitates the installation, particularly in timber profiles or where installation space is limited.

The new **M 13 65 / M 13 75** door loop is suitable for timber, aluminium and PVC doors with an opening angle of up to 180°. It has been available to order since August 2026.

We wish you sunny summer days,
plenty of refreshing moments and the perfect way
to cool down whenever you need it!

Best regards
Your **LINK** team
