

HIGHLY COMFORTABLE

- Miniature door loops with plug connection -

Miniature door loops are very popular with LINK customers – for several reasons. Their small size means that they can be installed easily in the window or door profile, making them invisible when closed – no milling required. But what customers value perhaps even more than this, is the fact that the cable connection can be disconnected extremely easily using a plug-in system. The benefits of this are particularly noticeable when window sashes or door leaves have to be removed, while conversely, installation on site is equally simple.

- A range of variants for every requirement -

Depending on customer requirements, the cable-carrying stainless steel spring can be laid in a U-shape (variant **M 13 34**) or straight (variant **M 13 35**). Both junctions have a six-wire cable with a 6-pin plug. This means that electrical components in the window or door can be safely supplied with power, and signals can be transmitted. The plug and socket are also waterproof according to the IP67 standard.

Variant **M 13 40** is the perfect solution for an alarm glass connection, for example in patio doors. **M 13 55** features a carrier box for the springs, with a circuit board with screw terminals attached to the rear. A range of components can be connected to this, depending on customer's requirements. These boxes are pre-installed during production of the window or door. All that remains to do is to connect the appropriate cables on site.

M 13 40

M 13 55

A range of accessories is also available for all miniature door loops from LINK. These include cover plates for wooden and plastic/aluminium frames. Carrier boxes for the springs are also available separately.
