

**Dear LINK customers,**

:: LINK expands its management team with the addition of Jürgen Witzendorff :: Extensive accessories for door loops simplify installation and ensure a clean look :: LINK product specialists will be at Security 2024 in Essen to answer your questions ::

**Jürgen Witzendorff:  
new Managing Director  
of LINK GmbH**

LINK is expanding its management team. In spring, the company appointed Jürgen Witzendorff as an additional managing director. He has had a hand in the company's evolution for 25 years and in recent years has been responsible for finance, marketing and sales as an authorized signatory.

Parallel to the expansion of the management team, LINK has also made adjustments to its organisational structure that will make us more agile and more responsive to our customers.

*"We want to offer our customers what they want and what they really need. In addition to innovative products, that means offering simple ordering processes and good service,"* says Jürgen Witzendorff.

LINK will increasingly focus on its core business and further expand its product range, from high-quality standard products at a fair price to custom products that are individually tailored to specific customer requirements.

**Little helpers for installing door loops**

When installing door loops on site, it's often the little things that make all the difference. That's why LINK offers its customers an extensive range of accessories. These include, for example, **carrier boxes** for installing door loops in wooden windows or frames, which can be inserted into a milled recess made by the manufacturer. When the window or door is closed, the door loop and the spring carrying the cable fit securely into the carrier box. A variety of different **cover plates** and **caps** ensure a clean look and can be used to cover drill holes, circuit boards and the like. And for rounded milled recesses, **radial end pieces** provide an optimal fit for installing door loops in carrier boxes with square tabs. You can explore the entire range of accessories in the [LINK product catalogue](#) and on the [LINK website](#).
